

1) Match the answer to complete the sentence:

A straight line is made up of _____ right angles.

A right angle is _____ degrees.

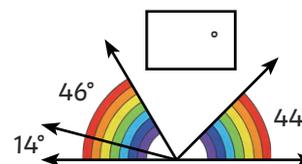

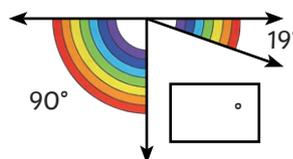

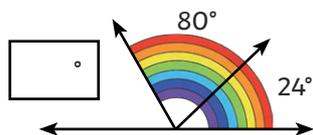

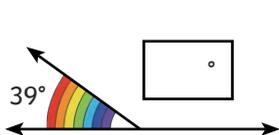

A straight line is _____ degrees.

180

90

2

2) Calculate the missing angles.

1) Jen says, "If I turn from 2 o'clock to 8 o'clock, this is a half turn – 180°".

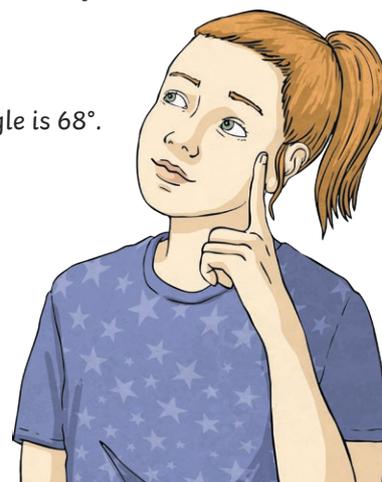

Is Jen correct? Prove it!

What other turns can you identify on a clock face that would be the same value of 180°?

2) Floria is describing angles on a straight line for her friend to draw.

She says one of the angles is 32°, another is a right angle and the final angle is 68°.

Is Floria correct? Prove it!

1) Calculate the missing angles on this picture and explain how you worked them out.

$a = \underline{\hspace{2cm}}^\circ$.

I know this because _____.

$b = \underline{\hspace{2cm}}^\circ$.

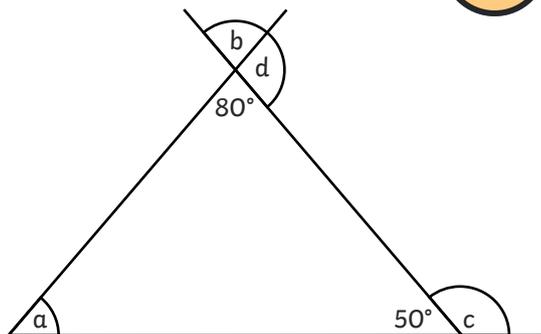

I know this because _____.

$c = \underline{\hspace{2cm}}^\circ$.

I know this because _____.

$d = \underline{\hspace{2cm}}^\circ$.

I know this because _____.

2) Create your own straight-line angle problem picture like the one above.

Don't forget to label some of the angles and work out the answers yourself!
